Data Flow Diagram

Create a Data Flow Diagram (DFD) to show how data moves through your system - between external entities, processes and data stores. Use the symbol legend below as a guide.

DFD Symbol Legend

Symbol	Name	Description
Oval / Rounded shape	External Entity	Represents an external user or system that sends or receives data. Example: User / Disaster Management Officer, Machine Learning Model.
Rectangle with numbered header	Process	Represents a process that transforms input weather data into prediction results. Example: Weather Data Input, Data Pre processing, FloodPrediction, Display Prediction Result.
Rectangle (solid fill, no number)	Data Store	Stores data for later use. Example: Weather Dataset, Prediction Results.
Labeled arrow	Data Flow	Shows the movement of data between entities, processes, and data stores. Example: Weather Parameters, Weather Data, Processed Features, Historical Weather Data, Trained ML Model, Prediction Output, Flood Prediction, Flood Risk Report.

Example

The diagram below illustrates how the symbols above come together to form a complete data flow diagram.
